

Improve the file transfer infrastructure

Industry: Finance/Insurance

Purpose of introducing HULFT products

Improve the flexibility and expandability of the infrastructure for file transfers between the head office and branch offices around the country.

Issues prior to introducing HULFT products

File transfers caused limitations in capacity, and large-capacity files had to be divided before they were sent. After a file transfer, detecting errors from subsequent processing was difficult and involved a lot of work.

Effect of introducing HULFT products

The removal of capacity limitations has eliminated the trouble of dividing large-capacity files before sending them. Delivery confirmation and the detection of errors from subsequent processing have been automated, significantly streamlining and reducing the work involved with file transfers.
